

The Image Access Bookeye 3 R1 scanner is ideal for scanning or copying, bound and large format documents. These include but are not limited too: books, maps, newspapers, folders stapled originals, drawings up to A1+.

Documents do not need to be unbound, separated or carefully positioned. Using the glass plate, the documents can be pressed gently against the book cradle which can be adjusted for height to achieve an optimal scan result.

The automatic electronic book fold correction smoothes the curvature of the book fold. The Image Access Bookeye 3 is available either as a color or greyscale unit. The greyscale unit can also be easily upgraded to a colour scanner. The Image Access Bookeye 3 is a high scan speed solution, has durable lamps and nearly no consumables, as well as high performance LED illumination, precise scan lenses and CCD image sensors.

Main features: Bookeye 3, 400dpi optical, A1 Color, Integrated motor driven book cradle and glass plate for book spines up to 100mm, foot switch, BCS software, 1000 MBit TPC/IP, for Windows, 1 year warranty OS.
